| 1. Abnormal Audiogram: | a) The threshold in either ear is more than 25 dB at 500, 1000 or 2000 Hz, or<br>b) The threshold in either is more than 60 dB at 3000, 4000, or 6000 Hz, or<br>c) there is one-sided hearing loss with the difference in hearing threshold level between the better and poorer ear exceeding the average of 30 dB at 3000, 4000, and 6000 Hz. |
| 2. Abnormal Shift:     | A threshold shift, in either ear, of 15 dB at two consecutive test frequencies from 1000 Hz up to and including 6000 Hz when compared to the baseline test. The "baseline" for the two frequencies involved will change to the abnormal test so that the same shift is not identified again. In this way, each abnormal shift is unique.       |
| Notes:                 | Only workers who were marked for general reporting are included in the summary.<br>A worker may have more than one test in a year, such as an Annual Test, plus a Test Not Used.   |
